

LEOPARD MANAGER

Leopard Manager is "The Mobility Solution" for managing and securing data, devices and applications at the point of activity. Leopard Manager has been built from the ground up to address the unique challenges of mobile environments. From initial deployment, software distribution, device configuration and more, Leopard Manager is an all encompassing device management solution.

Enterprise-grade, highly scalable solution with a central web-based console that allows IT and Operations the ability to control any size mobile rollout. Maintaining the reliability and security of mobile devices is challenging, Leopard Manager proactively manages devices, applications, data and communications critical to the success of mobile workers.

SECURITY MANAGEMENT enables an organisation to secure its mobile implementation. Leopard Manager encompasses data encryption, password validation, lock-out and other policy driven security measures.

CONFIGURATION MANAGEMENT ensures that mobile devices and systems are configured correctly in initial deployment and ongoing to ensure hassle-free operation. This includes OS settings, connection profiles and application options.

SOFTWARE MANAGEMENT is the mechanism to ensure your mobile rollout is utilising the latest software. Distribution tasks associated with keeping software current in the field are made easy.

INVENTORY MANAGEMENT allows for your enterprise to keep track of its mobile assets. Both from a hardware and software perspective, Leopard Manager allows business decisions to be made from an informed position.

BACKUP MANAGEMENT makes the data archiving and recovery process simple for any size organisation. By backing up critical business data this ensures its availability to both the user and the enterprise if the device is lost, damaged or stolen.

DOCUMENT MANAGEMENT is the best way to ensure that mobile workers always have the latest enterprise content they need. Disseminate documents, spreadsheets, HTML, graphics and text files with a few simple clicks.

LICENCE MANAGEMENT audits and provides full visibility into software installation and usage on mobile devices. This allows your enterprise to quickly compare software usage to licence agreements.

SESSION MANAGEMENT provides for extended non-programming scripting to automate business processes and further enhance other Leopard Manager modules.

WEB BROWSER CONSOLE allows for central management and control from a single console. The browser based interface is accessible real-time from any location.

REMOTE CONTROL offers real-time access to mobile devices. In addition to proactive device management, remote control offers the option to interactively train users or troubleshoot specific mobile devices.

PATCH MANAGEMENT is a sophisticated module that can send patches to remote and intermittently connected devices. Preventative and corrective maintenance of the OS can ensure your fleet operates with a standard environment.

MICROSOFT SMS INTEGRATION allows SMS 2003 administrators with direct access to a full range of Leopard Manager functions. It extends Microsoft SMS to address the unique challenges of a mobile environment.

THE MOBILITY SOLUTION

Combining over 15 years experience spent mobilising the workforce, the innovative **Leopard Manager** system is a cost effective, end-2-end, fully integrated, mobile solution designed to grow with your organisation and improve business performance overall. From initial deployment the benefits are self-evident: increased customer service through real time data transfer, labour cost savings, greater productivity and increased profits. Contact Leopard Systems today and discover the benefits for yourself.

SPECIFICATIONS

Leopard Manager

Development Environment: .NET, MSSQL

Client Operating Systems: Palm, Blackberry, Symbian, Windows Mobile, CE, Pocket PC, Windows XP, Unix.

Server Operating Systems: Windows Server

Communications: TCP/IP over Dialup, USB, LAN, WLAN, GPRS & 3G

Admin Console: Web based management console

Features: Software Management, Inventory Management, Configuration Management, Security Management, Document Management, Session Management, License Management, Microsoft SMS Integration, Remote Control and Asset Management.

Architecture

Leopard Manager delivers enterprise performance with minimal maintenance and cost, while seamlessly integrating into the IT infrastructure.

- Seamless integration with Microsoft SQL Server and Oracle.
- Provides integration with key directory technologies, such as NT and LDAP-compatible directories.
- A web based console supports Microsoft .NET technologies, allowing system administration and control of business and IT information.
- A broad range of connectivity options are supported, such as TCP/IP over wireless or wired connections, dial-up remote access connections (RAS), WAN, and high-speed LAN connections.
- Also supported are HTTP and HTTPS to allow users to connect over the internet and have a secure access point through corporate firewalls.
- The Leopard Manager server runs on Windows Server 2003 Standard or Enterprise with service pack, or Windows 2000 Server or Advanced Server with Service Pack 4.

ABOUT LEOPARD SYSTEMS

Established in 1992, Leopard Systems are leaders in providing fully-integrated mobile data solutions for a host of industries including freight and logistics, retail, manufacturing, government and healthcare.

By utilising quality hardware from leading manufacturers, packaged with the most comprehensive, yet user-friendly software written by our team of experienced professionals, our goal is to provide smart solutions, solve problems and ensure business systems run smoothly, to provide greater efficiencies and profits overall.
