### WARNING

**USING THIS SOLUTION COULD RESULT IN LOSS OF ALL DATA  
PLEASE PROCEED WITH CAUTION**

#### Setup Requirements:

- A MC70XX Mobile Computer running Windows Mobile 5 or Windows Mobile 6.

#### Download Instructions:

No additional files are required to perform this operation.

#### Installation Instructions:

- Try finding WLANs. To do this, tap the Mobile Companion icon (next to the Bluetooth icon on the Today screen). This ensures the WLAN Module is at least working, even if not correctly.
- Check to ensure the hardware is detected by the Mobile Device. To do this, tap Start > Settings, followed by the connections tab. Then select Network Cards. You should see an item starting with 'Marvell Yukon'.
- Check the Mobile Companion icon (next to the Bluetooth icon on the Today screen) to make sure it does not have a cross over it. If it does, refer to the 'How do I restore my MC70 to factory default?' document within the FAQ section of our website. If this does not solve the problem, your device will require a service.

**NOTE: Any MC70 with a manufacture date of after April 2008 does not support OS Version 3.35 or earlier. Loading on an earlier version will lock the WLAN Radio into a disabled state.**
